Jersey City, NJ / 848-260-7311 / aryavpatil.302@gmail.com / www.linkedin.com/in/aryapatil / <https://aryavpatil302.github.io/>

EDUCATION

University Of Michigan

Bachelor's of Science: Computer Science

May 2024

GPA: 3.6

Relevant Coursework: Data Structures and Algorithms, Web Systems, Machine Learning, Human-Centered Software Development

PROFESSIONAL EXPERIENCE

Broadridge

Software Engineer

Newark, NJ

July 2025 - present

- Act as first-line technical owner for production client issues, including diagnosing an off-hours data misalignment in a client-facing XML pipeline by tracing through large tax datasets and deploying a fix with proper escalation
- Author product tickets and user stories to translate regulatory compliance requirements into scoped engineering work, coordinating directly between client delivery timelines and engineering capacity
- Contribute to full-stack development of an enterprise tax processing platform (Java, HTML/CSS, XML), delivering Canadian tax form compliance updates aligned with evolving regulatory schemas

Career Foundations Program Trainee, Technology Track

July 2024 - July 2025

- Rotated across business units spanning Wealth Management, Capital Markets, Asset Management, and Enterprise Risk on a 2-3 week sprint cycle, independently scoping and delivering projects for senior stakeholders, presenting findings to leadership at each rotation close
- Investigated Asset Management support ticket patterns by interviewing developers and client support reps to identify root causes; produced a remediation roadmap targeting a 25% reduction in inbound support volume, recommending an Einstein GPT knowledge article system and an embedded AI chatbot for in-app client self-service
- Built a composite benchmark tool in Python (Pandas, Yahoo Finance API) that decomposed mutual fund holdings by security percentage and applied them to index daily and cumulative returns, then integrated the output into a web application used by wealth advisors to visualize portfolio performance

RELEVANT PROJECTS

Omnea Procurement Workflow Platform POC

April 2026 - present

- Researched and built a full-stack procurement orchestration platform replicating Omnea's core product, including a conversational AI intake agent, dynamic approval routing engine, risk scoring, and role-aware approver dashboard, to develop deep architectural and product understanding
- Engineered a declarative workflow rules engine generating conditional approval chains at runtime based on spend thresholds, data access levels, and supplier risk, fully client-configurable with no hardcoded routing logic
- Built a Workflow Builder UI with a horizontal canvas and configurable approval flow, and recorded 3 demo videos to showcase procurement agent, routing engine, and workflow builder for general audience

Broadridge, AI-Powered Developer Productivity VS Code Extension

July 2025 - present

- Owned development and support of agentic AI orchestration workflows that automated cross-codebase test case generation, partnering directly with users to prioritize functionality upgrades, troubleshoot workflow issues, and continuously refine agent behavior through rapid feedback and iteration cycles
- Developed a mainframe connectivity agent that parses legacy code, generates Java equivalents and plain-language explanations, reducing the bottleneck on specialized expertise during active migration work
- Integrated MCP server connectivity with Jira and Confluence for automated ticket review, requirement synchronization, and documentation retrieval within the development environment

Broadridge, Project Management Acceleration Through AI

October 2024 - April 2025

- Drove the full product lifecycle from initial stakeholder interviews and problem scoping through architecture design, full-stack development, and iterative live deployment, continuously refining requirements and authoring BRDs as new needs surfaced throughout the project
- Built a Power BI dashboard tracking RAG status, burn rate, and forecasted cost across an onboarding portfolio, and developed an AI chatbot (Python/Flask, React) generating natural-language insights for leadership review
- Developed an AI-assisted automated PowerPoint generator that pulled live portfolio data to produce slide decks with insights across key metrics including burn rate, RAG status, and cost forecasting, reducing manual prep time for leadership review meetings

SKILLS

- Programming: Python, Java, JavaScript, React, HTML/CSS, C++, C#
- Tools & Platforms: Jira, Confluence, Splunk, Power BI, AWS (Lambda, ECS, EC2), Agile/Scrum
